PROFILE

Applied AI engineer (MMath CS, University of Waterloo) building agentic development systems: LLM evaluation loops, MCP-backed git and Jira workflows, and AWS Lambda modernization for a Tier-1 Canadian bank. Claude Certified Architect Foundations. Prior contract work producing demonstration traces and code evaluations for LLM agents.

EXPERIENCE

Software Developer

BrainRidge Consulting

Nov 2024–Present

- Owned code evaluation, test, spec ingestion, and git-delivery agents on an internal multi-agent system that turned Jira requirements into pull requests (AWS Bedrock, Anthropic API, GitHub MCP, Atlassian MCP).
- Used AI agent best practices including prompts, skills, hooks, tools, and MCP servers as necessary to produce high-quality agents while maintaining consistency and efficiency.
- Built a workflow using the copilot CLI that migrates Lambda apps (internal CDK library, Node runtime, CVEs) across 65+ services at a Tier-1 Canadian bank; test/review agents halt with structured developer notes when a change is unsafe. ~ 75% faster upgrades (~ 80 hours saved);
- Took those services through bank SDLC (delivery letters, lower env, performance, production) with zero production issues.

Machine Learning Contractor

Invisible Technologies

May 2024–Oct 2024

- Full-time contractor to produce human demonstration traces and code critiques for LLM agent evaluation.
- Completed multi-step web tasks in an instrumented environment so action sequences could be used as computer-use training/eval data.
- Ran model-generated code in a sandbox, reproduced failures, and submitted corrected implementations as labeled eval signal.

EDUCATION / RESEARCH

- **MMath Computer Science, University of Waterloo** 2021–2023, 3.7/4.0. Thesis: user-specific explanations of AI attuned to psychological profiles (N=150 user study; PyTorch model vs. baselines).
- O. Chambers et al., “Mining user study data to judge the merit of a model for supporting user-specific explanations of AI systems,” Computational Intelligence, 2024.
- **Honors B.Sc. Computer Science, Brandon University** 2016–2021, 3.84/4.0.

PROJECTS

- **PETR** - Personal Claude Agent SDK orchestrator (TypeScript): Prepare / Execute / Test / Review with typed envelopes, retry briefs, and halt conditions. Runs unattended across multiple epics on my repos.
- **Anchor Events** - Solo Angular + Flask + PostgreSQL app for sports trip discovery; live at anchorevents.ca.

SKILLS

- **Languages:** TypeScript, Python, HTML, CSS
- **Technologies:** AWS (Lambda, CDK, Bedrock), Claude API / Agent SDK / MCP, Angular, Flask, PostgreSQL
